

Legacy System (glossary)

legacy system

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

(1) *A system that has been in operation for a long time, and whose functions are too essential to be disrupted by upgrading or integration with another system. (Arbutus Software 2012)*

(2) *A legacy system is an old method, technology, computer system, or application program that continues to be used, typically because it still functions for the users' needs, even though newer technology or more efficient methods of performing a task are now available. A legacy system may include procedures or terminology which are no longer relevant in the current context, and may hinder or confuse understanding of the methods or technologies used. (Wikipedia Contributors 2012)*
