(1) *Degree to which a system or computer program is composed of discrete components such that a change to one component has minimal impact on other components. (ISO/IEC 2011)*

(2) Software attributes that provide a structure of highly independent components. *(ISO/IEC/IEEE 2010)*

(3) In a resilience context modularity is a system resilience principle that states that the functionality of a system should be distributed through various nodes of that system so that if a single node is damaged or destroyed, the remaining nodes will continue to function. Jackson (2016) Modularity is a component principle in the tolerance attribute grouping. Jackson (2016)
