

# Satellite Positioning System (glossary)

---

satellite positioning system

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

*A positioning system based upon receipt of signals broadcast from satellites.*

Note to entry: In this context, satellite positioning implies the use of radio signals transmitted from "active" artificial objects orbiting the Earth and received by "passive" instruments on or near the Earth's surface to determine position, velocity, and/or attitude of an object. Examples are GPS and GLONASS.
