Technical Management (glossary)

technical management

> *The purpose of Technical Management is to steer the technical effort (commencing when the opportunity is identified) along the correct technical path to solution. Technical Management ensures integration (provides a bridge) between business / project management and all technical activity. Technical Management determines how the system approach can be carried out most effectively and efficiently in the attainment of value, cost targets and achievement of time-to-market.* (INCOSE 2020)
